

Table of Contents

Part I Context

Chapter 1 Introduction and overview

- 1.1. Definition and Introduction
- 1.2. History of research
- 1.3. Overview of the book

Chapter 2 Importance and roles of soil respiration

- 2.1. Soil respiration and ecosystem carbon balance
- 2.2. Soil respiration and nutrient cycling
- 2.3. Soil respiration and regional and global carbon cycling
- 2.4. Soil respiration and climate change
- 2.5. Soil respiration and carbon storage and trading

Part II Mechanisms

Chapter 3 Processes of CO₂ production in soil

- 3.1. Biochemistry of CO₂ production processes
 - Tricarboxylic acid (TCA) cycle
 - Other CO₂ production and consumption processes in soil
 - Respiratory quotient
- 3.2. Root respiration
- 3.3. Rhizosphere respiration with labile carbon supply
- 3.4. Litter decomposition and soil organisms
- 3.5. Oxidation of soil organic matter

Chapter 4. Processes of CO₂ transport from soil to the atmosphere

- 4.1. CO₂ transport within soil
- 4.2. CO₂ release at the soil surface
- 4.3. CO₂ transfer in plant canopy
- 4.4. CO₂ transport in the planetary boundary layer

Part III Regulation

Chapter 5 Controlling factors

- 5.1. Substrates and ecosystem productivity
- 5.2. Temperature
- 5.3. Soil moisture
- 5.4. Soil oxygen
- 5.5. Nitrogen
- 5.6. Soil texture
- 5.7. Soil pH
- 5.8. Interactions of multiple factors

Chapter 6 Temporal and spatial variations in soil respiration

- 6.1. Temporal variation
 - Diurnal and weekly variation

- Seasonal variation
- Interannual variability
- Decadal and centennial variation
- 6.2. Spatial patterns
 - Stand level
 - Landscape level
 - Regional scale
 - Biomes – Forests, Grasslands, Tundra, Savannas/woodlands, Deserts, Crop fields, and Wetlands
- 6.3. Variation along gradients
 - Latitudes
 - Altitudes
 - Topography

Chapter 7 Responses to disturbances

- 7.1. Elevated CO₂ concentration
- 7.2. Global warming
- 7.3. Changes in Precipitation frequency and intensity
- 7.4. Disturbances and manipulations of substrate supply
 - Fire or burning
 - Forest harvesting, thinning, and girdling
 - Grazing, clipping, and shading in grasslands
 - Litter removal and addition
- 7.5. Nitrogen deposition and fertilization
- 7.6. Agricultural cultivation
- 7.7. Relative and interactive effects

Part IV Approaches

Chapter 8. Methods of measurements and estimations

- 8.1 Methodological challenges and classification of measurement methods
- 8.2 Closed dynamic chamber (CDC) method
- 8.3 Open dynamic chamber (ODC) method
- 8.4 Closed static chamber (CSC) method
- 8.5 Gas chromatograph (GC)
- 8.6 Chamber design and deployment
- 8.7 Gas-well (GW) method
- 8.8 Miscellaneous indirect methods
- 8.9 Method comparison

Chapter 9 Separation of source components of soil respiration

- 9.1. Experimental manipulation methods
 - Direct component measurements and integration
 - Root exclusion
 - Severing substrate supply to rhizosphere
 - Litter removal
- 9.2. Isotope methods
 - Growing C₃ plants on C₄ soil or C₄ plants on C₃ soil
 - CO₂ enrichment experiments
 - Bomb ¹⁴C tracer
 - Labeling experiments

9.3. Inference methods

Regression extrapolation and modeling analysis

Deconvolution analysis

9.4. Estimated contributions of different sources

Chapter 10 Modeling synthesis and analysis

10.1. Empirical models

Temperature-respiration models

Moisture-respiration models

Substrate-respiration models

Multi-factor models

10.2. CO₂ production models

10.3. CO₂ production-transfer models

10.4. Modeling soil respiration at different scales

10.5. Model development and evaluation
